

What is Vacuum Therapy for Erectile Dysfunction?

Vacuum Therapy utilizes negative pressure to create blood inflow to the penis. This is achieved by placing the penis in a cylinder which draws blood into the erectile tissues with either a manual or battery vacuum pump attached to a cylinder. Next, an external constricting ring is placed at the base of the penis to prevent blood outflow from the corpora cavernosa, and an erection is maintained for sexual intercourse.

Vacuum Therapy Facts:

- Proven to work - **95%** clinical efficacy
- Works regardless of cause
- Safe to use
- Provides an erection for up to **30 minutes**
- Easy to use - works in under **one** minute
- **Gold** Standard Treatment by Physicians

Benefits of Vacuum Therapy:

Vacuum Therapy is the number one rehabilitation modality used by Physicians for E.D. following radical prostatectomy. Vacuum Therapy also helps to restore sexual function from other treatments such as radiation, cryosurgery, hormone therapy, chemotherapy & HIFU. Vacuum therapy has been clinically shown to revive erectile tissue by introducing much needed oxygen. This process helps aid in the rehabilitation process and helps to revive unhealthy tissue.
